

Adaptive Power Systems

Statement regarding REACH Directive

Adaptive Power Systems supports the basic aim of REACH in improving the protection of human health and the environment through the better and earlier identification of the intrinsic properties of chemical substances. Adaptive Power Systems will meet all REACH requirements and is committed to provide our customers with information about substances in our products according to future REACH requirements.

Under REACH, registration is required for substances that are used in the European Community for manufacturing of articles (e.g. manufactured goods such as cars, textiles, electronic chips), this requirement does not apply to our operations.

Suppliers of articles must provide recipients with information on Substances of Very High Concern (SVHC) if those are present above a concentration limit of 0.1 % on an article level. The published candidate list of substances is currently 53 items. It is anticipated that substances used in electronic products will be registered by raw material manufacturers within the supply chain. Adaptive Power Systems is working with its suppliers to comply with this REACH requirement.
